

Product sheet

Safe use of AI in the workplace.

AI Compliance.

Why implement a training course on AI?

In force since February 2025, the EU AI Act aims to ensure the safe, transparent, and ethical use of artificial intelligence. For companies, this means that staff working with AI must have the skills and knowledge to use the developing technology appropriately.

Our e-learning provides a practical demonstration of what is important when using AI in the workplace. Your employees will learn about opportunities, risks, and legal requirements while finding out how AI is used in accordance with the rules. They will also receive a clear overview of the most important points of the AI Act, ensuring that your employees use AI responsibly.

What are the features of our training course?

Our “AI Compliance” training course teaches the most important aspects of safely using AI in the workplace through a series of micro-lessons.

This multifaceted and practical training offers many case studies and easily understandable examples that help learners apply the knowledge confidently in everyday working life. Its learner-focused design features animations, simple navigation, and full audio ensuring an engaging learning experience.

As an optional feature, we also offer a playlist of lessons tailored to the individual risk profile of each learner. This means that learners only receive the lessons they really need.

The training includes features that encourage the learner to reflect on their learning, along with the option to save the most important learning objectives as PDF files.

Our training was developed with renowned experts and is kept up to date with the latest legislation.

Structure & content.

Risk profiling

Creation of individual lesson plans depending on the responsibilities of employees and managers

Knowledge lessons

Artificial Intelligence and Deep Fakes (~12 Min)

What are Deep Fakes and why can they pose a risk? • Are there ways to recognise whether content has been generated by an AI?

AI for Managers (~11 min)

What opportunities and risks does the use of AI present • What role do managers play • Handling scepticism toward AI • Legal framework for AI deployment

Opportunities and risks of AI (~8 Min)

What is "Artificial Intelligence" (AI)? • Where is AI used? • What legal issues need to be considered when using AI? • What opportunities and risks does the use of AI systems offer?

The EU AI Act (~8 Min)

What is the aim of the EU AI Act? • What are the main contents of the regulation? • What requirements must high-risk AI systems fulfil?

Data Protection and AI (~6 Min)

What data protection risks are there when using AI systems? • What needs to be considered when using AI systems in the workplace?

Case Studies

Deadline. Data. AI. (~10 min)

How can AI be meaningfully integrated into everyday work • What to keep in mind when using AI in a professional context • How prompts work • Who is responsible for AI generated content

Social Engineering (~10 min)

What is social engineering • How targeted manipulation works • In which situations is vigilance required

Assessment

Final test with a certificate

Expert author.

Dr. Johann Bizer, Chairman of the Board of Dataport, the IT service provider for public administration in Schleswig-Holstein, Hamburg and Bremen, advised us on legal matters for this training course. AI is a key topic at Dataport and, as an expert, Dr Bizer ensures that our content is legally correct in accordance with the EU AI Regulation.

Customization options.

Selection

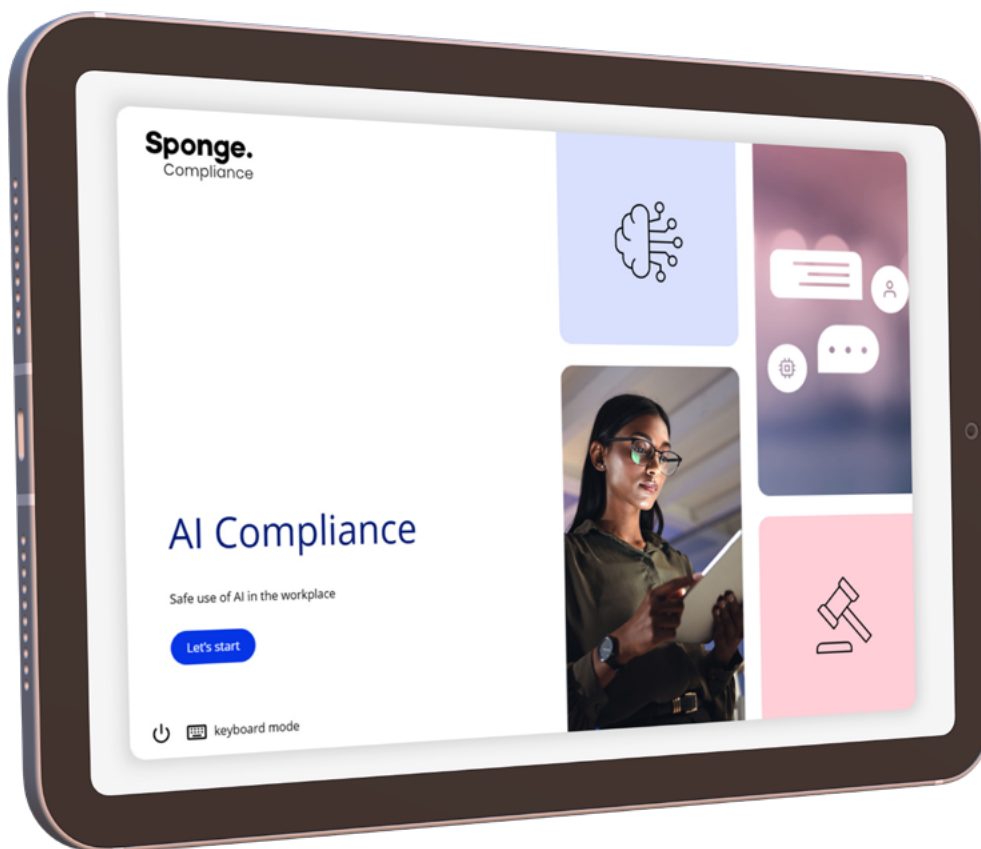

Choose the lessons that are relevant to you – cross-topic lessons are also possible.

Personalization

Add your logo, contact persons, registration channels, and additional materials. We will adapt the look and feel to your brand for a high level of engagement.

Modification

Modify existing content to create an even stronger link to your company. Or work with us to develop your own individual lessons, which we can integrate into your course.

Learning portal.

Not sure how to train AI Compliance in an audit-proof way? Use our compliance learning platform to easily enrol all learners (internal and external) in the course. External learners who are not connected to your company's own software can participate in the digital training via self-registration on our platform. Our system comes with a reminder function, and the dashboard gives the administrator real-time control and insight into the learning progress and training status of your staff.
